

Meridian Active Project Documents-CXS Modifying files

Purpose

Instructions for CXS to modify the EBCX files in Meridian Active Projects. To modify the files means to replace the document content with a new file, or in some cases open and modify the current document, save it and close it.

Procedure

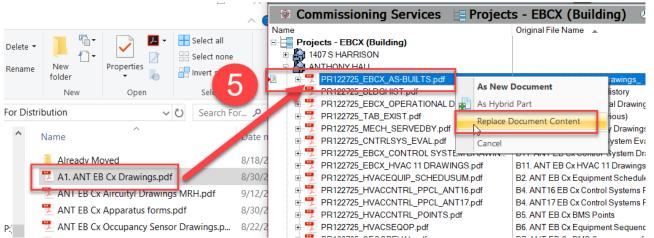

- 1. Find the file in Meridian then right-click on it
- 2. Select Document Workflow
- 3. Select Start Quick Change
- 4. Click OK

Now the file is ready to be "modified".

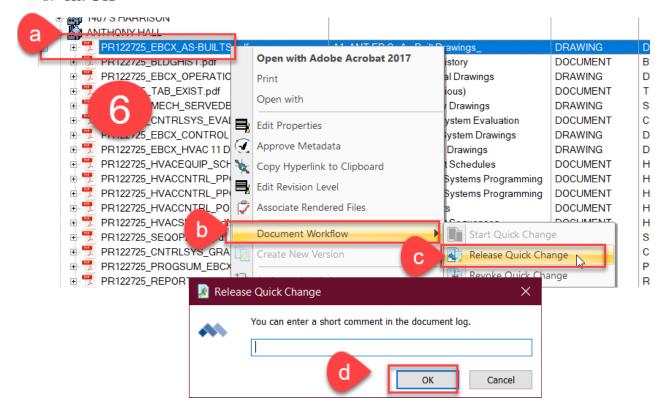

5. Drag the new file into that will be replacing the old file and drop it **directly on top** of the file already in Meridian.

It won't seem like anything happened, but once you release the file (next step), the new file will be there instead of the old file.

- 6. Release the Document into Meridian.
 - a. Right-click on the file
 - b. Select **Document Workflow**
 - c. Select Release Quick Change
 - d. Hit OK
